## CÓMO EJECUTAR UNA APLICACIÓN DE SPRING BOOT

#### CÓMO EJECUTAR

- Usamos maven
- Plugin para Spring Boot
  - mvn spring-boot:run

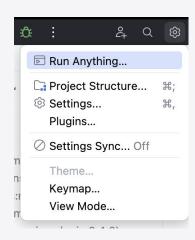

- Panel lateral de maven
- Escoger la opción correcta

```
⊕ 12 ± + ▷ 10 ∅ ∅ × 12 ◎
 ∨ m demo
   > 6 Lifecycle
   Plugins
      clean (org.apache.maven.plugins:maven-clean-plugin:3.3.2)
      > compiler (org.apache.maven.plugins:maven-compiler-plugin:3.
      > and deploy (org.apache.maven.plugins:maven-deploy-plugin:3.1.3)
      > finstall (org.apache.maven.plugins:maven-install-plugin:3.1.3)
      > figar (org.apache.maven.plugins:maven-jar-plugin:3.4.2)
      > @resources (org.apache.maven.plugins:maven-resources-plugir
      > site (org.apache.maven.plugins:maven-site-plugin:3.12.1)

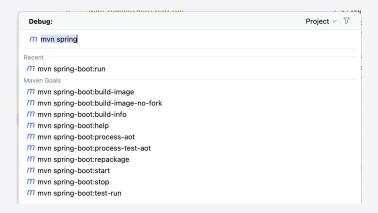

✓ ¶ spring-boot (org.springframework.boot:spring-boot-maven-pli)

           m spring-boot:build-image
           m spring-boot:build-image-no-fork
           m spring-boot:build-info
           m spring-boot:help
           m spring-boot:process-aot
           m spring-boot:process-test-aot
           m spring-boot:repackage
           m spring-boot:run
           maspring-boot:start
           m spring-boot:stop
           m spring-boot:test-run
      > surefire (org.apache.maven.plugins:maven-surefire-plugin:3.2.
```

- Run Anything...
  - Pulsar 2 veces control
  - o Menú superior

- Run Anything...
  - Escribimos el comando

• Crear perfil de ejecución
